

Math 112—HW 4 Rubric

Greg Knapp

April 30, 2018

The homework consisted of the following problems

- 2.2A (2, 3, 7, 10, 17)

Section 2.2A

2. 2 points. 1 point each for the correct values of \sin and \cos . If they find the hypotenuse incorrectly, but both of their \sin and \cos values are consistent with the value they chose for the hypotenuse, they should receive 1 of 2 points.
3. 2 points. They should receive 2 points if they have a correct answer and 1 point if they were on the right track, but made a minor mistake (e.g. using \sin instead of \cos).
7. 2 points. 2 points for a correct answer, 1 point if they show mostly correct work, but make a minor mistake.
10. 3 points. 1 point for showing some kind of attempt to solve the problem, 1 point for being mostly correct, and the final point for the correct answer.
17. 3 points. Same as problem 10.
